

IMPORTANT EU Exam Details and Tips- please give to veterinarian

Dr. Hungerbuehler will evaluate the EU test. He states the follow, "I need color Doppler examination of the ureteral jet in long and short axis. I need measurement of the beginning of the ureteral jet to the vesicourethral point. If we see two ureterjets in the bladder using color Doppler or b-flow we are sure, that everything is all right. 15 mm are considered optimal."

Additional notes from successful tests done in the U.S.

1. A diuretic is used to increase the flow of urine to the bladder, e.g. lasix , furosemide.
2. Examining area of the belly is shaved.
3. Anesthesia is used to insure stillness of the dog.
4. IV fluids can be administered to insure urine flow to the bladder.

Veterinarian puts the test in Dropbox:

Please put the data in this folder

<https://www.dropbox.com/sh/2u1pztkpmm8ha5p/AABUSI1F7RracogFrA3TzBfMa?dl=0>

. JPEG, avi, mpeg, Dicom is possible. Alternatively I have a onedrive link for you:

<https://1drv.ms/f/s!AsqS0i-K8ZX3gfV3tJ3vyAjVAUAd8w>.

Emails the link and EU Findings Form as an attachment to Dr. Hungerbuehler:

eu-untersuchungen@tiergesundheitszentrum-hungerbuehler.de

Please copy GNA Breed Warden, Bobbe Carney:

If blood has not previously been collected, it should be done so at this time. The Blood Form should also be taken to the vet, filled out and signed. Follow instructions for sending the blood sample to U.S. storage facility and scan and email form to: bobbe.carney@gmail.com. Check yes on the EU form regarding storage of a blood sample. Be sure to sign and date the EU findings form.
